In June 2009, the trust index level of the economic activity¹ was at 15.00, index lower by 20.00%, regarding the registered the month before (18.75) and lower by 10.02% regarding the observed in June the previous year (16.67).

¹ The index is made based on four questions. Their calculation is derived from considering sub-indexes for each question; same that result from the balance of answers that are obtained subtracting, for each question, the percentage of positive answers, the percentage of negatives and add a constant of 100, with the purpose of avoiding negative quantities. The sub-indexes obtained this way for each question are averaged and the trust index results from expressing said average value as a percentage of the maximum possible average.
